Summary

Performance-driven Full-Stack Engineer with 3+ years of experience specializing in Node.js, ReactJS, JavaScript, and NoSQL/SQL-driven enterprise software. Proven track record in designing scalable API Architecture and integrating complex microservices for global platforms. Committed to optimizing high-performing software and streamlining developer workflows via GitHub and Agile methodologies to deliver high-impact web applications.

Work Experience

Full-Stack Developer

November 2024 – Present

AIVN, HA NOI, VIETNAM

- Design and build high-impact ExpressJS APIs and ReactJS features using TypeScript to integrate Python-based AI services for 200,000 active users.
- Maintain RabbitMQ messaging and Socket.IO real-time communication channels within a microservices architecture, processing 100,000 messages daily.
- Troubleshoot and resolve production hotfixes and critical issues to minimize incident response time and modernize legacy codebases.
- Lead code reviews for a team of 6 developers and manage CI/CD workflows via GitHub to ensure high release quality and stability.
- Optimize core business logic and database query performance to reduce workflow processing time and improve overall system responsiveness.

Back-End Developer

September 2023 – November 2024

VMO HOLDINGS, HANOI, VIETNAM

- Engineered ExpressJS APIs for user verification and admin management within an enterprise microservice architecture for a US-based KYC platform.
- Integrated third-party identity-verification services and API integrations, reducing manual document review time through automated workflows.
- Optimized admin management efficiency and SQL data retrieval by troubleshooting legacy logic and improving query structures.
- Designed NestJS APIs for order and store management using a Kafka-based microservice architecture in an Agile development environment.
- Reduced data mismatches by 15% by redesigning core order-history and stock-tracking logic for high-performing e-commerce applications.

Software Development Intern

June 2022 – September 2022

FPT SOFTWARE, HANOI, VIETNAM

- Built front-end and back-end components using JavaScript, jQuery, and MySQL, following the Software Development Lifecycle (SDLC) standards.
- Practiced enterprise-level development methodologies and participated in technical training programs to streamline software delivery.

Education

Master. in Computer Science in Computer Science

HARRISBURG UNIVERSITY, HARRISBURG, US

August 2026 – Present

B.S. in Software Engineering in Software Engineering, GPA: 3.2/4

FPT UNIVERSITY, HANOI, VIETNAM

September 2019 – September 2023

Additional Skills

Core Technical Skills: JavaScript, TypeScript, Node.js, SQL, NoSQL

Frameworks and Architecture: Express.js, NestJS, React.js, Microservices, REST APIs, Message Queue, Socket IO

Data and Cloud: PostgreSQL, MySQL, MongoDB, Redis, Kafka, RabbitMQ, Azure, AWS, Docker

Methodologies and Tools: GitHub, Jira, Agile, CI/CD, SDLC, API Integration

Certifications

- Back End Development and APIs - freeCodeCamp (January 2023)
- Software Development Lifecycle - Coursera (January 2021)
- Web Design for Everybody: Basics of Web Development & Coding - Coursera (January 2020)

Languages

- English - IELTS 6.5
- Vietnamese - native

Awards

- Top 5, "Crafting ESG Solutions on Hedera Guardian" Hackathon, 2023
